SalmAbic®

Bivalent Salmonella Vaccine

Inactivated bivalent water-in-oil Salmonella vaccine for the protection of breeders and layers against *S. enteritidis* (Group D) and *S. typhimurium* (Group B)

Proved efficacy in field conditions for the reduction of infection and shedding of *S. enteritidis* and *S. typhimurium*. Vaccination with SalmAbic prevents the massive spread of Salmonella to ovaries and other internal organs and provides progeny protection for the first 10 days at age, due to high levels of maternal antibodies in the yolk.

Benefits of SalmAbic®

Highly immunogenic

Provides high antibody titers against *S. enteritidis* and *S. typhimurium*

Progeny protection

reduces the risk of eggs and progeny contamination.

Meat protection

SalmAbic® improves human health by reducing contamination of eggs and meat

Safe to use

SalmAbic® contains inactivated bacteria with no risk of infection to vaccinated birds

Reduces disease pressure

SalmAbic® reduces the infection pressure on poultry premises and the risk of re-infection of new flocks

Indications

SalmAbic® indicated for the vaccination of Layer & Breeder chickens against *S. enteritidis* and *S. typhimurium*

Administration

SalmAbic® is administered by subcutaneous injection before point of lay

Package and Storage

Store under refrigeration (+2 C - +8 C) Do not freeze. Bottles of 500ml (1000 doses)

Vaccine strains

S. enteritidis - PT (C8, B3),
S. typhimurium – PT [2(+4)]

TAbic® family – TAbic® V.H., TAbic® IBVAR206, TAbic® IB Var, TAbic® H-120 and TAbic® M.B.
